Shivam Vipul Kapadia

Champaign, IL | 217-530-7553 | svk7@illinois.edu | linkedin.com/in/shivam-kapadia | github.com/shivamvkapadia

Education

University of Illinois Urbana-Champaign | *B.S. Computer Engineering, Semiconductor Minor* Expected Dec. 2028

- **Honors:** GPA 3.96/4.00, Dean's List (Fall 2025, Spring 2026), James Scholar, IEEE-HKN
- **Scholarships:** Grainger Engineering Achievement Scholarship, A.R. "Buck" Knight Scholarship
- **Coursework:** Data Structures, Computer Systems and Programming, Linear Algebra, Discrete Mathematics
- **Illinois ECE:** Grader, ECE 120 Computing; Course Assistant and Grader, ECE 110 Electronics
- **Department service:** ECESAC Academic Committee Member; Front Desk Representative

Skills

Languages: Python, TypeScript, JavaScript, C/C++, Java, SQL, HTML/CSS, LC-3 Assembly, Bash
Backend and AI: FastAPI, Python asyncio, REST APIs, Prisma, LLM APIs, Model Context Protocol (MCP)
Frontend and analytics: Next.js, React, MediaPipe, p5.js, Tableau
Data and infrastructure: PostgreSQL, Row Level Security, Supabase, SQLite, Docker Compose, GitHub Actions, Git
Practices: Automated testing with pytest, CI, Code review, Performance profiling, Log-based root cause analysis

Projects

Meter, LLM Cost Governance Proxy | *Python, FastAPI, PostgreSQL, asyncio* Aug. 2026

- A drop-in **proxy** in front of an AI team's **LLM** calls that meters spend and refuses any request over budget
- Owned the payments and treasury workstream on a four-person, three-day build: **2,000 lines**, **205 tests**
- Designed an **idempotent** charge path that logs intent first, so a lost reply resumes rather than bills twice
- Isolated blocking calls from the shared **asyncio event loop**, so one stalled call cannot freeze every request
- Reduced every database read from **201ms to 50ms** by running the **connection pool** in autocommit
- Discovered **CI** had never run the test suites, then repaired **GitHub Actions** and got all **551** checks running

myHR, Multi-Tenant HR Platform | *JavaScript, Supabase, PostgreSQL, MCP* Sep. 2026

- An HR workspace joining an employee directory, onboarding automations and **kanban** boards, with **Slack** sync
- Authored **27** Postgres **Row Level Security** policies enforcing four-role **RBAC**, mirrored in the UI
- Implemented onboarding as a **database trigger**, so adding an employee builds their checklist in one **transaction**
- Integrated AI agents through an **MCP server** with **15 tools**, behind role-scoped, **SHA-256** hashed API keys
- Unified **Supabase** and browser storage behind one data interface, so the live demo runs with no server at all

Applywise, Job Application Tracker | *Next.js 16, React 19, TypeScript, Prisma, SQLite* July 2026

- A job tracker that drafts a cover letter, resume bullets and interview prep from a posting using an **LLM**
- Modeled the pipeline in **Prisma**, rewriting a column's ordering in one **transaction** so positions never drift
- Generated all four documents in one **parallel** pass, so the wait is the slowest call rather than the sum

PalmSlash, Real-Time Hand Tracking | *JavaScript, MediaPipe, p5.js* June 2026

- A webcam browser game that tracks both hands in real time, running fully **client-side** with no server
- Optimized tracking to a steady **60 fps** by throttling **MediaPipe** inference to **22 Hz** and filtering between samples

Experience

Revamp, Agentic AI Consulting at UIUC | *Software Engineer* Sep. 2026 – Present

- **Clearline**: a tool turning scanned billing PDFs into reviewed spreadsheets, a job of **6–9 hours** a week by hand
- Structured corrections as an **overlay**, so extracted values, **OCR** confidence and source pages are never overwritten
- Enforced **all-or-nothing** validation over **16** schema-derived fields in **FastAPI**, so no bad input half-saves a record
- Engineered **atomic** local saves (temp file, then replace) that restore on reopen, so a crash never loses progress
- Delivered an **approval flow** where editing an approved record forces re-approval, plus **source PDF** preview
- Shipped **Medicare** eligibility worklists and spreadsheet export, with color-coded **OCR confidence** per field
- Added **59 tests**, including **XSS** payloads, with **CI** green on **Ubuntu** and **Windows**

Pandit Deendayal Energy University | *Machine Learning Research Assistant* Jan. 2024 – Feb. 2025

- Comparative analyses of **machine learning** for environmental forecasting with Dr. Manan Shah, one in review
- **Air quality, Springer 2025:** Compared **SARIMA**, **KNN** and **SVM** across published results; **hybrid models** won
- **Rainfall, first author:** Surveyed **70 papers** on **SVM** and **Random Forest** forecasting, mapping where claims conflict
- Recommended pairing ML with **time-series** data gathered at regular intervals, to capture rainfall trends over time
- Proposed **location-based** phone alerts as an instant flood and cyclone warning, so people can evacuate in time

1Rivet | *Software Engineering Intern* May 2024

- Built the web screens a manufacturing client's customers used, hand-coding the whole front end in **HTML** and **CSS**
- Wrote the **SQL** queries that store and retrieve company records, and ran backup, recovery and purge routines

ValU Wealth Care | *Data Analysis Intern* Dec. 2023 – Feb. 2024

- A wealth management firm where the analysis fed investment decisions the advisers then put to their clients
- Graphed multi-year performance for **three** iron and steel penny stocks in **Tableau** to weigh their growth potential
- Evaluated diversification across **small, mid and large cap** positions to shape advice by client income level
